

Environment Policy

TechCollect NZ is dedicated to creating a community that collects, processes and safely treats electrical and electronic products for responsible environmental outcomes. By working in conjunction with industry partners, government, our members and the community, we strive to be leaders in the field of product stewardship. We are dedicated to implementing product stewardship programs for used and unwanted products to address and reduce their negative lifecycle impacts and to prevent pollution. We are committed to moving towards a circular economy and the implementation of consistent product stewardship approaches for priority products and related materials.

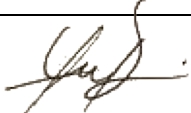

We are committed to minimising the environmental impact of our operations and supply chain and the promotion of circular economy practices that result in resource conservation and net social benefit. We maintain full compliance with all applicable regulatory requirements and set environmental objectives and targets for our key environmental impacts, regularly monitoring our progress and making improvements as required.

It is a requirement of TechCollect NZ that all of our suppliers and contractors also conduct their operations in a socially and environmentally responsible manner. We monitor this through our auditing and stakeholder engagement processes.

Finally, we will facilitate transparency in our reporting by openly communicating our environmental performance, challenges we encounter and achievements we make, to our employees, members, service providers, industry partners and the community.

It is important to the success of our services and vision for continual improvement that all employees are aware of their role and responsibilities in sustaining TechCollect NZ's environmental management system and policy.
