

Environment Policy

TechCollect NZ is dedicated to creating a community that collects, processes and safely treats electrical and electronic products for beneficial environmental outcomes. By working in conjunction with industry partners, government, our members and the community, we strive to be leaders in the field of product stewardship and mobilise New Zealanders to manage their e-waste safely and responsibly. We are focused on implementing product stewardship initiatives for used and unwanted products and materials to address and reduce their negative life cycle impacts and to prevent pollution. We strongly support the principles of a circular economy and the implementation of nationally consistent product stewardship approaches for priority products and related materials.

We are committed to minimising the environmental impact of our operations and supply chain and the promotion of circular economy practices that result in resource conservation and net social benefit. We maintain full compliance with all applicable regulatory requirements and set environmental objectives and targets for our key environmental impacts, regularly monitoring our progress and making improvements as required.

It is a requirement of TechCollect NZ that all of our suppliers and contractors also conduct their operations in a socially and environmentally responsible manner. We monitor this through our auditing and stakeholder engagement processes.

We facilitate transparency in our reporting by openly communicating our environmental performance, any challenges we encounter and achievements we make, to our employees, members, service providers, industry partners and the community.

It is important to the success of our services and vision for continual improvement that all employees are aware of their role and responsibilities in sustaining TechCollect NZ's environmental management system and policy.

Michael Dudley
Senior Policy Manager
TECHCOLLECT NZ LIMITED
