

Recycling re-uses materials over and over!

- When you recycle your e-waste, the materials can be broken down and made into new products.
- Recycling is good because we don't need to rely on new materials from the earth to make new products every time!
- Fun Fact — for every 1,000 kilograms of e-waste recycled we save over 2 million litres of water — that's almost enough water to fill an Olympic size swimming pool!
- In New Zealand we produce nearly 100 million kilograms of e-waste every year. If we recycled all of our e-waste we would save enough water to fill 40 Olympic sized swimming pools every year!

Be a tidy kiwi, do the right thing and recycle your e-waste responsibly!
